This web application is about managing a to-do list. Here is a short video showcasing the application. [Here is a short video explaining the code and infrastructure](#). I will send the code once we agree on everything.

First Part: Test plan

Write a document which lists the test cases you would like to write for this application. For each of the test cases specify what we are testing, why we are testing it and a short description of how the implementation will look like (type of test and tools). This list should be sorted based on priority: so, the first test case will have the most impact in improving the reliability of the application.

What to deliver?
A document.

Second Part: Test implementation

Task
Pick some of the test cases of your plan and implement them.

What to deliver?
A zip file with the application code and tests.
